Project Management for Managers

Lec – 39

Probability Models in Networks - I

Dr. M.K. Barua

Department of Management
Indian Institute of Technology Roorkee

Probability of achieving a project on completion date..

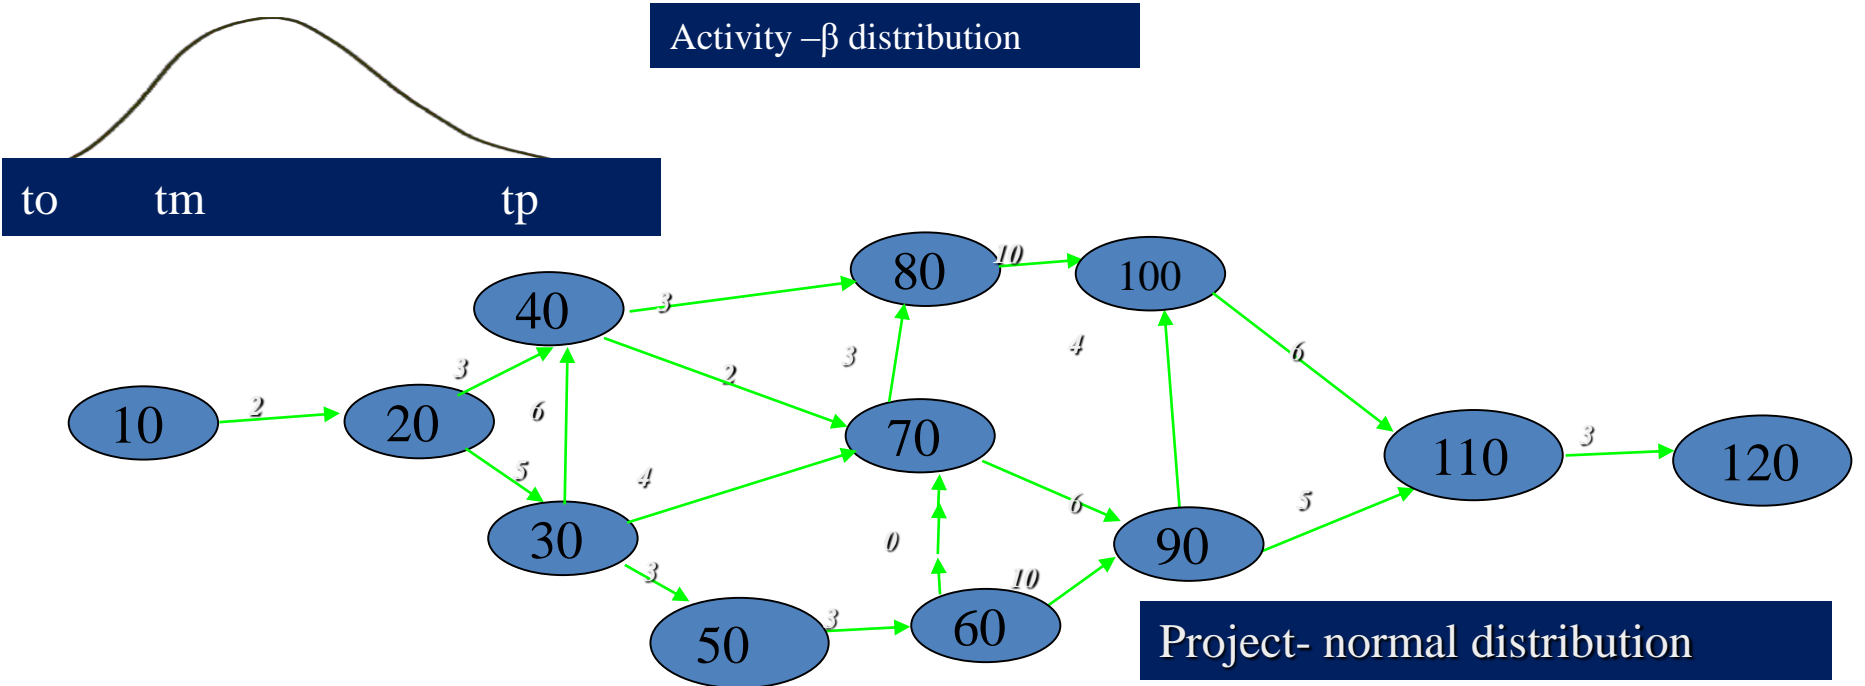

If T_s as “1 σ ” towards left of T_e than the area under curve would be ??? and if it is “1 σ ” towards right of T_e , the areas would be %.

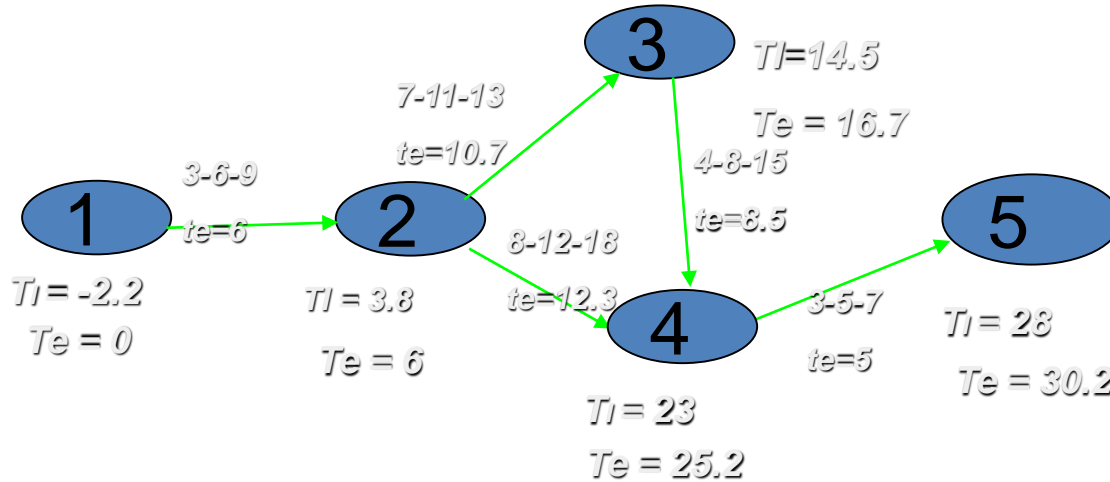

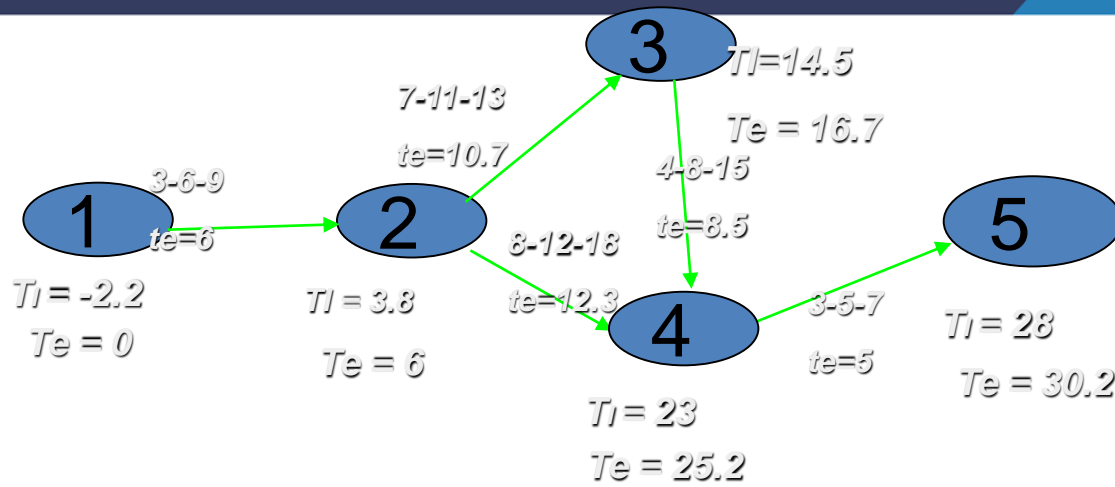

If T_s as 1σ towards left of T_e than area under the curve would be 15.9% and if it is 1σ towards right of T_e , the areas would be 84.1%.

Central limit theorem: Relationship b/w shape of population distribution and shape of sampling distribution of mean is called CLT.

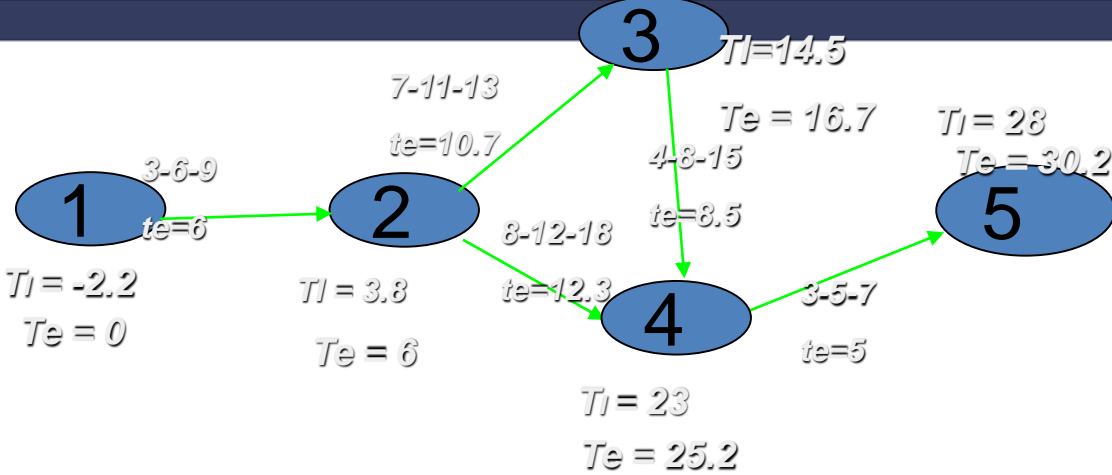

Find critical path and variance along critical path. What is the probability that the project will be completed in 28 days?.

Activity	to	tp	$(\sigma)^2$
1-2	3	9	1
2-3	7	13	1
3-4	4	15	3.36
4-5	3	7	.44
Variance along Critical Path			5.8

Activity	to	tp	$(\sigma)^2$
1-2	3	9	1
2-3	7	13	1
3-4	4	15	3.36
4-5	3	7	.44
Variance along Critical Path			5.8

23.6 25.8 $Ts-28$ $Te-30.2$ 32.4 34.6 36.8

-3σ -2 -1 μ $+1$ $+2$ $+3\sigma$

$Z = \frac{Ts - Te}{(\sigma)} = \frac{-2.2}{2.41} = -0.91$

from z table the area under curve is 18.4%.

Appendix Table 1

Areas under the Standard Normal Probability Distribution between the Mean and Positive Values of z

Example:

To find the area under the curve between the mean and a point 2.24 standard deviations to the right of the mean, look up the value opposite 2.2 and under 0.04 in the table; 0.4875 of the area under the curve lies between the mean and a z value of 2.24.
